

HR Analytics & Employee Attrition Analysis Report

1. Project Overview

In this project, I analysed employee data using SQL and Power BI.

The goal of this project was to understand employee attrition, identify key factors affecting attrition, and provide insights to improve employee retention.

I created an interactive HR dashboard to analyse attrition by department, job role, salary, overtime and job satisfaction.

2. Overall Attrition Overview

- Total Employees: 1470
- Employees Left: 237
- Attrition Rate: 16.1%

Insight:

The company has a moderate attrition rate.

Employee retention strategies are required to reduce employee turnover.

3. Department-wise Attrition

- Highest attrition is in Sales and Research & Development departments.
- HR department has lower attrition compared to others.

Insight:

Employees in Sales and R&D may be facing higher workload or pressure.

The company should focus on improving retention in these departments.

4. Job Role Analysis

- Sales Executive, Laboratory Technician and Research Scientist roles show higher attrition.

Insight:

Certain job roles have higher employee exits.

The company should review workload, growth opportunities and incentives for these roles.

5. Salary Impact on Attrition

- Employees in low salary group have the highest attrition.
- Medium and high salary employees show lower attrition.

Insight:

Salary and compensation play an important role in employee retention.
Improving salary structure may help reduce attrition.

6. Overtime Impact

- Employees working overtime have higher attrition than those who do not.

Insight:

Work-life balance may be a major reason for employees leaving the company.
Reducing overtime and managing workload can improve retention.

7. Job Satisfaction Analysis

- Employees with low job satisfaction show higher attrition.

Insight:

Employee engagement and work environment need improvement to reduce attrition.

8. Conclusion & Recommendations

Overall, employee attrition is mainly influenced by low salary, overtime workload and job dissatisfaction.

To reduce attrition, the company should:

- Improve salary and compensation structure
- Reduce overtime and workload pressure
- Focus on employee engagement and satisfaction
- Provide better growth opportunities for employees

In this project, I analysed HR data and built an interactive dashboard using SQL and Power BI to identify key attrition factors and provide business insights.
